IN THE CLAIMS

- (Currently amended) Swimming goggles comprising a face-covering element which
 comprises a visor region formed by a first layer of transparent elastic material, eye sealing
 elements adapted to sealingly engage with a wearer's face, and fastening means which in
 use hold said goggles in place, characterized in that said first layer is co-molded with said
 eye sealing elements in a unitary construction and wherein in use said first layer is
 elastically deformable with said eye sealing elements to engage said wearer's face.
- (Previously presented) Swimming goggles according to claim 1, wherein a molded nose region is provided to fit around said wearer's nose.
- (Previously presented) Swimming goggles according to claim 1, wherein said facecovering element is of unitary construction.
- (Previously presented) Swimming goggles according to claim 1, wherein said visor region comprises a single lens region.
- (Previously presented) Swimming goggles according to claim 1, wherein said visor region comprises two lens regions.

6.	(Previously presented) Swimming goggles according to claim 1, wherein said fastening means comprise a band which, in use, encircles said wearer's head.
7.	(Previously presented) Swimming goggles according to claim 1, wherein said fastening means comprise arms which, in use, are releasably fastened together.
8.	(Currently amended) Swimming goggles according to claim 1, wherein said face-covering element the device is formed of a plastics material.
9.	(Previously presented) Swimming goggles according to claim 1, wherein the visor region is treated with an anti-fog coating.
10.	(New) Swimming goggles according to claim 1, wherein said first layer has a greater hardness grade than the hardness grade of said eye sealing elements.
11.	(New) Swimming goggles according to claim 2, wherein said visor region comprises transparent silicone.

12.	(New) Swimming goggles comprising a face-covering element which comprises:
	a. a visor region formed by a first layer of transparent elastic material, said first layer
	of transparent elastic material having a first hardness grade and being made of a
	first material;
	b. two eye sealing elements formed integrally with said first layer, said two eye
	sealing elements being made of a second material having a second hardness grade
	which is softer than said first hardness grade;
	c. at least one lens region formed integrally with said first layer, said at least one lens
	region being made of a third material having a third hardness grade which is
	harder than said first and second hardness grades; and
	d. a band attached to said first layer which encircles the wearer's head.
